# How do I rename a project in My Projects?

We take the title from your document's `\title` command, or you can set a different title in the document settings menu.

Most document classes support a title command in the preamble, so you can set your project's title like this:

```
\documentclass{article}
...
\title{My Title Here}
...
\begin{document}
...
\end{document}
```

Note that if you specify a short title, we'll use it instead of the long title. For example, in a `beamer` presentation:

```
\documentclass{beamer}
...
\title[Short Title]{Longer Title}
...
\begin{document}
...
\end{document}
```

If your project does not have a `\title` command, or you want to display a different title in your My Projects dashboard, go to the project, click the gear icon in the top right, and uncheck the *Set Automatically from the \title Command* box. Then you can enter a title. Note that you must be signed in in order to change the title of a document.
